

WordPress plugin for event overview

Display your Conference Manager events directly on your own website

Show live event data from Conference Manager on your WordPress site, so visitors can discover events on your own domain and within your own brand experience.

Requires a self-hosted WordPress site

Requires Conference Manager API user

1 Install and connect

Add the plugin and log in with your CM credentials.

2 Customise the overview

Choose what to show and match to your brand.

3 Publish on website

Add to a page and you're ready to go!

Customise without code

Choose what visitors see and how the list looks.

Event overview on your own domain

Visitors see the events directly on your website, not on a separate destination.

Simple to customise

Choose visible fields, colours, spacing and layout from the plug-in settings.

Always in sync

The list fetches data from the Conference Manager API every 15 minutes and stays up to date.

Less friction for attendees

Visitors can discover events on your website and continue directly to Conference Manager with a single click.

Design to fit your brand

You can match the event overview to your website using built-in options for colours, fields, card styles and layouts. If necessary, your development team can customise it further using stable CSS classes and variables.
